

# Final Report Figures

---

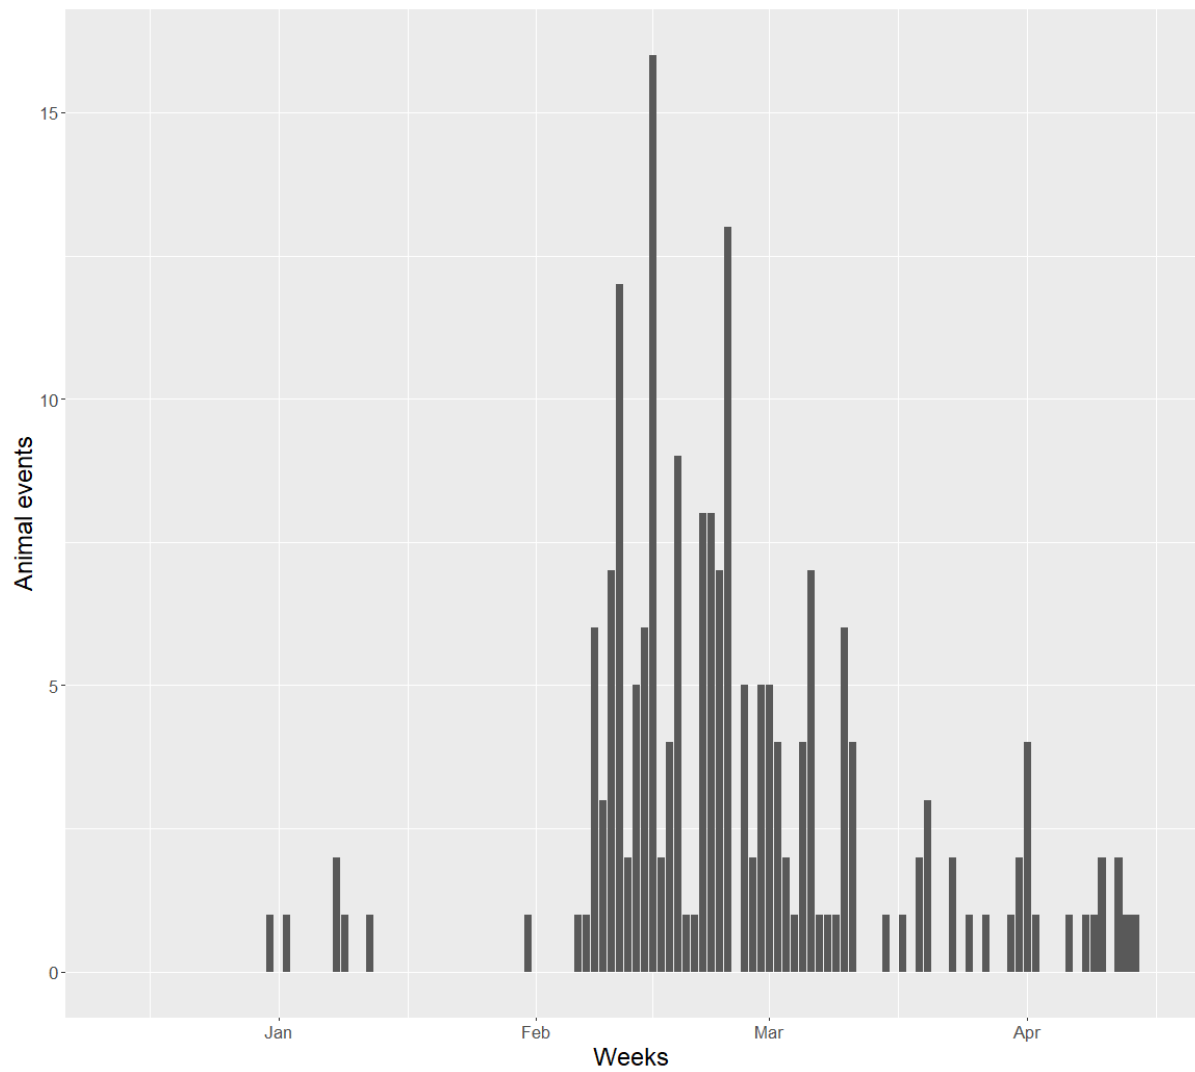

**Figure 1.** Counts of all animal events detected at tunnel and control sites. Red lines depict average number of events per day. An interval of 1 minute between detections of the same species was used to define events, and events were standardised to account for differences in camera functioning periods.

**Figure 2.** Counts of small mammal events detected at tunnel and control sites. Red lines depict mean events per day. An interval of 1 minute between detections of the same species was used to define events, and events were standardised to account for differences in camera functioning periods.

**Table 1.** All species detected at either control or tunnel sites from November 2020 – April 2021. “Unidentifiable” species were detections where it was not possible to obtain positive identification of species, but which could be classified into broader groups.

Treatment	Species	Events
Control	Bush rat	30
	Common brushtail possum	11
	Common dunnart	4
	Dusky antechinus	2
	Eastern yellow robin	2
	House mouse	75
	Painted Buttonquail	3
	Pied currawong	1
	Red-browed Firetail	3
	Rockwarbler	3
	Superb fairywren	4
	Unidentifiable bird	3
	Unidentifiable macropod	7
	Unidentifiable small mammal	181
	Wombat	18
Wonga pigeon	3	
Tunnel	Bush rat	1
	House mouse	3
	Unidentifiable bird	2
	Unidentifiable small mammal	189

**Figure 3.** Animal events at tunnel sites for the first 6 months post-tunnel instillation (November 2020-April 2021). Animal activity is unstandardised as camera functioning was the same across all tunnel sites.
